

HAVILAND HOT BOX

Thank you for purchasing a Haviland Hot Box.

This sheet deals principally with setting up, operation and maintenance.

** Remove Hot Box from transport packaging.*

** Un-clip mains wire from base.*

** Install drip tray in front of base.*

** Unwrap the inner baskets.*

** Plug in the machine and switch on. Two neon indicators will light, one being the on/off switch.*

** Upon reaching its working temperature it will cut out automatically and the neon next to the on switch will go out. When the machine temperature drops to a preset limit it will cut in again, thereby maintaining a working temperature.*

** To start using your hot box; simply load up the inner basket with towels and await warming. For best results switch on and load your Hotbox one hour before towels are required, (especially if you keep towels in freezer), thereafter twenty minutes is sufficient.*

** Your inner basket has two levels, allowing you to use one level whilst the other is warming new towels.*

** Please switch your Hot Box off overnight and leave door open.*

** Empty the drip tray at regular intervals.*

** Clean the cabinet inside and out with a damp cloth only.*

** Should your Hotbox fail to function; check the fuses located in the plug and on the rear of the machine.*

** Your Haviland Hot Box will need no other maintenance.*

** Careful use of your machine will extend its working life.*

**** DO NOT TAMPER WITH THE INSIDE OF THE MACHINE, AS THIS WILL INVALIDATE THE WARRANTY***
